ARYAN NAIK

Mumbai, India | +91 8104266189 | aryannaik365@gmail.com | linkedin.com/in/aryan-naik | github.com/Aryannaik-max

EDUCATION

Indian Institute of Information Technology, Ranchi 2024 – 2028

Bachelor of Technology in Electronics and Communication Engineering (IoT & Embedded Systems)

TECHNICAL SKILLS

- **Languages:** C++, JavaScript, TypeScript, SQL, HTML, CSS
- **Frontend:** React.js, Next.js, Redux Toolkit, Tailwind CSS, Monaco Editor
- **Backend:** Node.js, Express.js, Socket.IO, Prisma ORM, Passport.js, JWT
- **Databases & Infrastructure:** PostgreSQL, MongoDB, MySQL, Redis, Docker, Cloudinary
- **Tools & Methods:** Git, GitHub, Postman, Vercel, Render, Microservices, REST APIs

PROJECTS

CodeClash / *Next.js, TypeScript, Express, Socket.IO, PostgreSQL, Prisma, Redis, Docker* Live | GitHub

- Engineered a 1v1 real-time competitive programming platform matching players into live coding duels with hidden test case evaluation and dynamic Elo-based rating calculations.
- Architected real-time matchmaking and sync using Socket.IO backed by a Redis adapter, ensuring low-latency bidirectional state propagation.
- Designed a scalable PostgreSQL database schema via Prisma ORM covering Users, Problems, Matches, and Submissions with language-specific starter templates.
- Integrated Wandbox API for remote code execution with automated pipeline tracking (`PENDING` → `RUNNING` → `ACCEPTED/WRONG_ANSWER`) alongside dual OAuth/JWT authentication and an in-browser Monaco Editor.

NovaSpace / *React.js, Node.js, Express, MySQL, Liveblocks, JWT, Cloudinary* Live | GitHub

- Architected a collaborative workspace SaaS featuring a real-time document editor and integrated live discussion threads powered by Liveblocks and React state management.
- Built an interactive Kanban project management board supporting prioritized state workflows (To-Do, In-Progress, Completed).
- Secured application endpoints using JWT authentication to isolate collaborative workspace environments and protect board data.
- Integrated Cloudinary for robust asset uploading and styled a fully responsive, mobile-first interface utilizing Tailwind CSS.

ChitChat / *React.js, Node.js, Socket.IO, Redis, MongoDB, Passport.js, Cloudinary* Live | GitHub

- Developed a real-time messaging application using Socket.IO for low-latency, bidirectional message distribution and persistent conversation history.
- Implemented secure OAuth 2.0 authentication via Passport.js (Google strategy) paired with granular JWT-based authorization.
- Integrated Redis for distributed session storage and fixed-window rate limiting over a MongoDB schema structured for media metadata and nested chat history.

OPEN SOURCE CONTRIBUTIONS

Jasmine / *JavaScript Testing Framework (4.3k+ Stars)* PR #2107

- Resolved an issue where `pendingReason` returned empty strings for specs disabled via `xdescribe`, isolating the root cause across core execution files (`Suite.js`, `Spec.js`, `SuiteBuilder.js`).
- Fixed a bug in `Spec.exclude()` where instance state was referenced improperly, preserving explicit exclusion messages across suite execution cycles with complete unit test coverage.

iD Editor / *OpenStreetMap (Main Web Map Editor)* PR #12373

- Diagnosed and resolved link navigation failures in Custom Background Settings caused by cross-origin iframe security policies on openstreetmap.org.
- Patched Markdown-generated links rendered via `marked()` with `target="_blank"` and `rel="noopener noreferrer"` to enforce secure external tab navigation.

ACCOMPLISHMENTS

- **CodeChef:** 2-Star Coder (Max Rating: 1448); consistently placed in top 10% of Division 3 contest participants.
- **LeetCode:** Solved 200+ algorithmic problems covering Data Structures & Algorithms (Contest Rating: 1417).
- **Codeforces:** Active competitive programming participant.
